

HF Packer Amp V4 Pi Network Control

PINET MODEL 100-PI Add-In Assembly Option

The 100-PI module extends beyond the LP Filter Module and is located above the PSU

Description: Add-In option for the HF Packer Amp V4. This option allows you to set the maximum power input to 1W, 2.5W or 5W by the placement of a jumper at CTL. This module is installed in the case and requires no holes added to the case.

The two RF cables route with very short connections from the Amp.

- 3-Position programming header
- 12V relays control pi-resistive networks

A 2dB resistive pi network is installed on the AMP module. Add additional attenuation using the PINET 100-PI module. Choices are 2dB, 3dB and 9dB corresponding to 1W, 2.5W and 5W Max RF Input scales.
